

Vaccines

Why are vaccines important?

- Vaccines work with your body's natural defenses to protect against infection and help reduce the risk of disease.
- They do this by imitating an infection without causing the disease — and getting your immune system to respond the same way it would to a real infection. This prepares your body to recognize and fight the disease in the future.
- Check with your doctor to see if the vaccines below are right for you.

Common vaccines covered under Medicare Part B

Use your HealthSelectSM Medicare Advantage ID card when getting the following vaccines:

- Influenza (flu)
- Pneumococcal
- Hepatitis B for individuals at medium or high risk for hepatitis

Common vaccines covered under Medicare Part D

Use your HealthSelectSM MedicareRx ID card when getting the following vaccines:

- Shingles
- Tetanus, diphtheria, pertussis (Tdap)
- Hepatitis A
- Hepatitis B for individuals at low risk for hepatitis

Use your Medicare Red, White & Blue ID card when getting the following vaccine:

- COVID-19*

*You will have \$0 cost-share (copayments, deductibles or coinsurance) on FDA-authorized COVID-19 vaccines at both in-network and out-of-network providers through Dec. 31, 2021.

Did you know?

- 40 – 60% of vaccinated people are less likely to get the flu¹
- For all Americans 50+: Shingrix vaccine is more than 90% effective at preventing shingles and long-term nerve pain²
